4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 14-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Gross, et al, U.S. Patent Number 6,553,515.

6. Regarding claim 14:

- b. Regarding the limitation of “a media gateway for converting between POTS voice traffic and IP voice traffic, the media gateway including a processor having a system management mode that executes code to monitor a state of the media gateway,” Gross discloses a system with a gateway to convert analog and packetized data (Lines 10-15 of Column 4). Gross also discloses that the gateway can be coupled to a diagnostic supervisor that can monitor the state of the data and system. (Lines 50-63 of Column 1).
- c. Regarding the limitation of “a signaling gateway for converting between POTS signaling traffic and IP signaling traffic, the signaling gateway including a processor having a system management mode that executes code to monitor a state of the signaling gateway,” Gross discloses a system with a gateway with the ability to allow a user to place a call by dialing numbers and then converting them across the network until the final destination. (Lines 15-32 of Column 14). Gross also discloses that the gateway can be coupled to a diagnostic supervisor that can monitor the state of the data and system. (Lines 50-63 of Column 1).
- d. Regarding the limitation of “a gateway controller coupled to the signaling gateway for receiving signaling messages there from and determining IP routing addresses corresponding to telephone numbers, the gateway controller including a processor having a system management mode that executes code to monitor a state of the gateway controller,” Gross discloses a system with a gateway with the ability to allow a user to place a call by dialing numbers and then converting them across the network until the final destination. (Lines 15-32 of Column 14). Gross also discloses that the gateway

can be coupled to a diagnostic supervisor that can monitor the state of the data and system. (Lines 50-63 of Column 1).

e. Regarding the limitation of “a high availability system controller coupled to all of the media gateway, the signaling gateway and the gateway controller, the high availability system controller having policy and procedure code configured to execute when triggered by at least one of the media gateway, the signaling gateway and the gateway controller in response to at least one event,” Gross discloses a system with a diagnostic supervisor that is coupled to the communications system. The DS is capable of monitoring for faults and executing real-time responses to diagnostic information. (Lines 50-58 of Column 1 and Lines 33-36 of Column 2).

7. Regarding claim 15, Gross discloses a system that can gather data about a communications system fault via a diagnostic supervisor. (Lines 50-58 of Column 1). Gross also discloses a Resource Reallocation Controller that can disable parts of a system is an error is determined to have occurs. (Lines 1-10 of Column 17).

8. Regarding claim 16, Gross discloses a system in which a rerouting control can reroute traffic over a PTOS system. (Lines 50-53 of Column 16).

9. Regarding claim 17, Gross discloses a system with a real-time response manager to reroute Internet connections if a connection has an error. (Lines 43-60 of Column 16).
